Biography

I am a third-year Ph.D. student at Yonsei University, advised by **Prof. Dong-Hyun Kim** in the **Medical Imaging AI Lab (MILAB)**. In 2025, I am also conducting research as a **visiting student** at the **Vision and Learning Lab (VLLab), UC Merced**, under the supervision of **Prof. Ming-Hsuan Yang**, expanding my expertise in computer vision and generative modeling.

My doctoral research focuses on medical image analysis and computer vision, with a particular emphasis on developing deep learning methods to address **clinical unmet needs** such as the **missing modality issue** in MRI. My broader research interests include **segmentation, super-resolution, motion artifact correction, image generation, disentangled representation learning, and MRI analysis**. I am motivated by challenges that bridge fundamental deep learning techniques with real-world clinical applications, aiming to create robust and generalizable AI solutions for healthcare.
